My Sustainable House Design

Furnace

The furnace heats the house, and can reduce peoples energy use

Sustainable Material

Sustainable Material are produced without depleting non-renewable resources

Energy Efficient Housing

This reduces the bad impact on the resources for other in the future

Insulation

The fiberglass fill in walls transfers slow heat to the house during the colder months

Ventilation

This is a heating system once the air system is inside the house it is collected and the distributed throughout the house

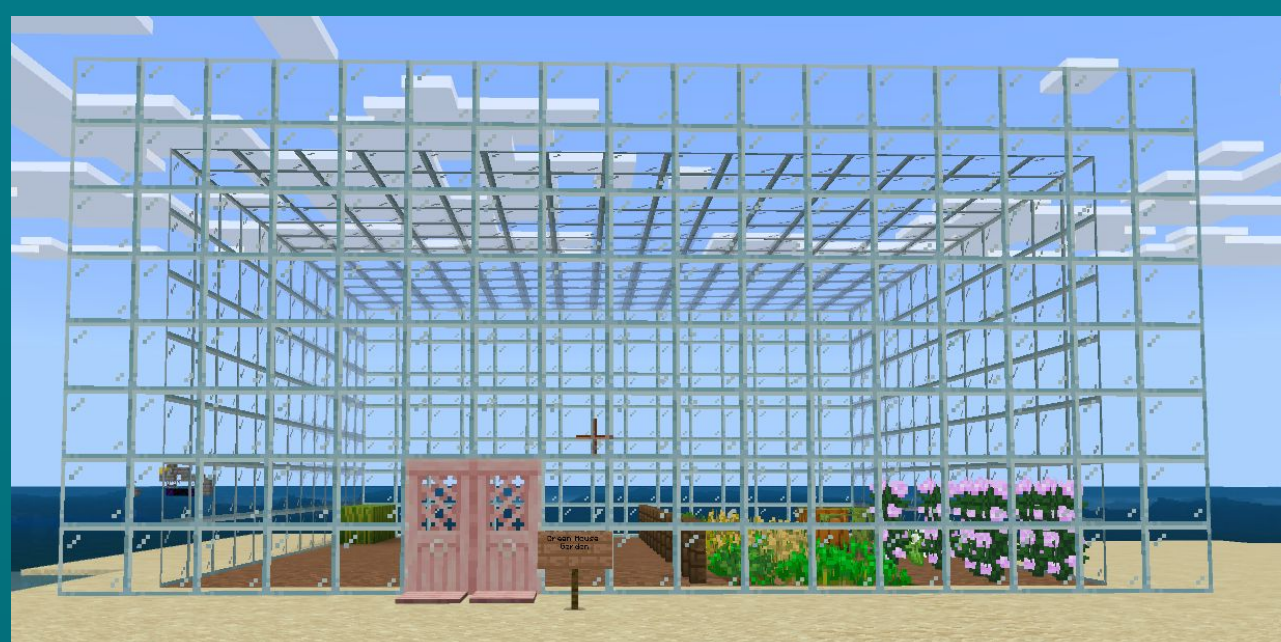

Window Film and Smart Blinds

Window Film is just manual blinds and once the smart blinds are connected to the temperature control system they will open and close automatically

Passive Energy Collection

The energy from the sun can be saved and stored in battery packages for later in the year

Green House Garden

It uses less water than aquaponics and is a good food source

Rainwater Collection

Eco-friendly, and no need to pay for water

Hurricane Proof Windows

Protects house from strong hurricanes

Earthquake Resistant Support

Protects house from Earthquakes
